

UNIVERSITY OF TECHNOLOGY  
CHEMICAL ENGINEERING DEPARTMENT

B.Sc. PROGRAMME IN CHEMICAL  
ENGINEERING

OUTLINE OF SYLLABUSES  
ALLOCATION OF SUBJECTS  
&  
WEEKLY LOAD

Scientific Committee  
1987

## INTRODUCTION

Chemical Engineering is distinguished from other branches of Engineering by its strong dependence on chemistry. This enables the chemical engineer to understand processes involving changes in physical state, chemical composition, or energy content for systems ranging in scale from molecules to full sized manufacturing plants.

The chemical engineer may be employed in an established industry producing chemicals, petroleum products, pharmaceuticals, synthetic Fibers, Foods, plastics or metals. These products are steadily needed in an increasing amounts due to the expanding growth of population. His Function may be involve in making innovations in existing operations, doing research, development and analysis of existing plants, technical services, or scale up.

Due to his broad knowledge, the chemical engineer often occupies a dominant position in the above mentioned Industries. He may also apply his knowledge in such driverse areas as air and water pollution or biomedical research.

The formal course work for B.Sc. programme involves mathematics, including both analysis and computer applications, chemistry, physics, and chemical engineering principles and practice subjects including fluid dynamics, heat transfer, unit operations, chemical reactor design, thermodynamics, and chemical processes. In addition, the programme involves subjects in humanities and social sciences to help the student to a fuller appreciation of his relationship and responsibility to society in general. The programme branches in the fourth year to three schemes in chemical Industries, petroleum and petrocheical Industries and engineering materials with their specialised subjects.

A considerable emphasis is laid, in this department, on practical training and laboratory work, which helps students in getting better understanding of the theoretical part of their curriculum.

Moreover students are required to spend twelve weeks, training in industry during summer vacations.

This booklet contains the academic programme and the syllabus for both technical and social subjects which are taken by the chemical engineering students during their four years study.

Dr. M.S. Hameed

Head of Scientific

Committee

3

Refer to centralized curriculum

First year curriculum

Subject: Mathematics (1)

Theoretical practical Tutorial Units

3                      -                      1                      7                      weekly load(h/w)

1- Revision:

- Slope and equation of the straight line.
- Trigonometric Functions and their sketches.
- Functions, definitions; domain, Range, Inverse of functions, Absolute value.
- Limits, Definitions of the limit of a function, theorems about limits,  $\lim \sin x/x$ , continuity.

$$x \longrightarrow 0$$

- Differentiation and integration of algebraic functions.

(12hrs)

2- Determinants, Definitions and properties, Solution of systems of equations, (Cramers Rule). (9hrs)

3- Solution of the algebraic equations (second and third order). (3hrs)

4- Transcendental functions: Trigonometric, INV, natural logarithmic, exponential, and power functions. sketches. (12hrs)

5- Conic sections (circle, parabolic, Ellipse). (6hrs)

6- Hyperbolic functions: Definitions, Derivatives and integrals. (6hrs)

7- Complex Numbers: Definitions, Argands diagram, product and quotient of two numbers,

$z = r (\cos r + i \sin r)$  and roots of eqn. (6hrs)

8- Applications of integrals

- i) Area between two curves.
- ii) Volumes.
- iii) Length of curve.
- iv) Surface areas.

(12hrs)

9- Methods of integration.

- i) Basic formulas.
- ii) Power of trigonometric function
- iii) integrals involve  $\sqrt{a^2 - x^2}$ ,  $\sqrt{a^2 + x^2}$ ,  $\sqrt{x^2 - a^2}$
- iv) integrals of  $ax^2 + bx + C$
- v) partial fractions.
- vi) Integration by parts.
- vii) The substitution  $U = \tan X/2$
- viii) Improper integrals (conv, and dity).

(15hrs)

10- Polar coordinates:

- i) The polar coordinates system
- ii) graphing of polar coordinates.
- iii) derivatives and tangent lines and area in polar.

(9hrs)

## First year Curriculum

### Material and Energy balance

#### Theoretical Practical Tutorial Units

---

3                      -                      1                      7 weekly load(h/w)

- Concept of chemical engineering, units, Dimensions, Labels; conversion factors, Temperature, pressure. (15hrs)
- Composition, chemical Analysis, chemical formulas, chemical Equations and stoichiometry. (9hrs)
- Material balance calculations without and with a chemical Reaction, Recycle, By pass and purge calculation, for steady state, combustion calculation. (24hrs)
- Ideal gas laws; Real gas relationships; vapour pressure, saturation, Material balance involving condensation and vapourization. (15hrs)
- Energy balance; first law of thermodynamics: Enthalpy; heat capacities, their prediction and variation with temperature heat effects. (15hrs)
- Simultaneous mass and energy balance. (12hrs)

## First year Curriculum

Subject: Chemistry

Theoretical Practical Tutorial Units

---

3                      2                      1                      9                      weekly load(h/w)

### Part 1 (Analytical and General Chemistry).

---

- 1- Introduction (4hrs)  
atomic weight, molecular formula  
chemical equations, mole concept,  
Chemical equilibrium  
Stoichiometry.
  
- 2- Solutions (8hrs)  
Preparation and properties, molarity,  
molality, Normality, formality, ppm,  
percentages, PH,POH  
Solubility.
  
- 3- Analytical methods  
  - a. Qualitative Analysis (3hrs)
  - b. Quantitative Analysis (6hrs)
    1. Volumetric Analysis  
Acid -Base Titration, Titration, Redox Tiration,  
and precipitation Titration and Titration curves.
    - 2- Gravimetric Analysis. (3hrs)  
Precipitation analysis and percentage.
    - 3- Instrumental Analysis. (6hrs)  
electromagnetic spectrum  
caluoremtric analysis.  
chromotography  
atomic absorption and PH-meters

### Part II (Otganic Chemistry)

---

- 1- Definition and Aspect of organic. (3hrs)  
chemistry and classification of organic compounds.
  
- 2- Aliphatic compounds, prepartion and (26hrs)  
properties .  
  
Addition and substitution reactions.  
  
Aliphatic derivatives.

3- Aromatic compounds, preparation and properties.

Aromatic derivatives. (20 hrs)

4- Hetrocyclic compounds. ( 5hrs)

Polymers and Carbohydrates.

5- Organometallic Chemistry. (6hrs)

# First year curriculum

## Engineering Drawing

weekly load (h/w)

Theoretical    Practical    Tutorial    Units

-                    -                    3                    2

- 1- General Information. (2 week)  
(Graphic instruments and their use; the alphabet of lines; standarization of paper).
- 2- Graphic Geometry. ( 2 Weeks)
- 3- Orthographic drawing and sketching (3 weeks)  
(Orthographic Isometric, Orthographic dimetric, oblique frontal diametric).
- 4- First angle projection, third angle projection. (5 weeks)
- 5- Constructing a third projection of a model Machine part of from two given projections. (2 weeks)
- 6- Sectional views and conventions. ( 5 weeks)
- 7- Drawing for Engineering design and construction, ( 6 weeks)  
(Making of design, Details, Assembly, Production, construction, and other drawings).
- 8- Threads; Welded Joints; Nuts. (3 weeks)
- 9- Inked drawing. (2 weeks)

Total

30 weeks

## First year Curriculum

### Mechanics and Strength of Materials

---

#### Theoretical Practical Tutorial Units

---

	2	-	1	5	weekly load (h/w)
<b>A- Mechanics</b>					
1- Principles of statics					(3hrs)
2- Resultants of force systems.					(3hrs)
3- Equilibrium of force systems.					(3hrs)
4- Friction.					(2hrs)
5- Centroids and centers of gravity.					(6hrs)
6- Frameworks analysis.					(4hrs)
7- Forces in space.					(4hrs)
8- Principles of Dynamics (Motion, Kinetics, Kinematic).					(5hrs)
<b>B- Strength of Materials</b>					
1- Internal forces in non-rigid bodies.					(2hrs)
2- Definition of stress and strain, types of stresses and strains, shear stress.					(3hrs)
3- Hooks law.					(1hrs)
4- Free-body diagrams.					(2hrs)
5- Stress-strain Diagrams, stress-strain Diagram for ductile-and brittle materials.					(3hrs)
6- Proportional limits, elastic limit, stiffness, elasticity, plasticity, toughness, Resilience, hardness, poissons ratio bulk modulus.					(4hrs)
7- Composite stress.					(3hrs)
8- Thermal stress.					(3hrs)

9- Torsion and power transmission by shaft. (5hrs)

10- Beam, shear and moments in beams (4hrs)  
deflection.

## First year Curriculum

### Electricity

#### Theoretical Practical Tutorial Units

1	-	1	3	weekly load(h/w)
1-	Semiconductors equipments.			(2hrs)
2-	Rectifiers and Detectors.			(3hrs)
3-	Electronic amplifiers.			(4hrs)
4-	D.C. Circuits.			(3hrs)
5-	D.C. generators and motors.			(3hrs)
6-	A.C. circuit.			(5hrs)
7-	Polyphases circuits.			(2hrs)
8-	Transformers and Induction motors.			(4hrs)
9-	Starters.			(2hrs)
10-	Integrated circuits, Measuring Instruments, Tranducers, Transmeter.			(3hrs)

First year curriculum

Computers Science

Weekly load (h/w)

Theoretical	Practical	Tuoterials	Units
1	1	-	3

2 hr weekly during 1st and 2nd semesters. Total of 60 hrs per academic year.

	Lecture(hr)	Practical(hr)
--	-------------	---------------

1- man and machine.	3	1
- the need of data processing. Historical Background.		
- Electronic computer generations.		
- Kinds of computers: MICROS, MINIS, and MAIN-FRAME.		
2- Electronic Computers.	4	2
- Computer Hardware and accessores.		
- Computer Software.		
3- Binary system, commands.	8	2
machine language.		
Programming language: High level and low level.		

First year Syllabus

Work Shop

Weekly load (h/w)

<u>Theoretical</u>	<u>Practical</u>	<u>Tutorial</u>	<u>Units</u>
-	6	-	non-credit

Sheet metal, Forging, Fitting, Machining, Electricity,  
Carpentry, Automotive mechanics, Welding, Foundary.

## Second year curriculum

### Mathematics (2)

#### Theoretical Practical Tutorial Units

2

5

Weekly load(h/w)

#### I- Partial differentiation.

(10hrs)

- Functions of two more variables.
- Limits and continuity.
- Partial derivatives.
- Chain rule.
- Gradients, directional derivatives and tangent planes.
- Higher order derivatives.
- Maxima, Minima and saddle points.
- Langrange multipliers.

#### II- Complex Algebra.

(10hrs)

- Conjugate number.
- Demoires theorem.
- The complex variables.
- Derivation of complex variable.
- Analytic Functions.
- Integration of functions of complex variables and cauchys theorem.

#### III- Multiple Integrals.

(8hrs)

- Double Integrals.
- Area.
- Triple Integrals in rectangular coordinates.
- Physical application in the three dimensions.

IV- Vector Analysis.

(8hrs)

- Vector component and the unit vector  $i$  and  $j$ .
- Addition and subtraction of vectors.
- Multiplication of vectors.
- Quadratic surfaces.
- Greens theorem.
- Stockes's theorem.

V- Functions and definite integrals.

(6hrs)

- The Error function.
- The Gamma function.
- The Beta function.
- Evaluation of definite integrals.

VI- Infinite Series.

(10hrs)

- Power series of Functions.
- Talyors theorem.
- Convergence of power series.
- Integration, differentiation, multiplication and division.
- Fourier series, even and odd functions, half range expansion, periodic functions.

VII\_ Matrices.

(8hrs)

- The matrix.
- Matrix algebra.
- The transpose of matrix.
- The inverse of matrix.
- Eigen values, Eigen vectors.

## Second year Curriculum

### Fluid Mechanics

---

#### Theoretical Practical Tutorial Units

---

	3	2	1	9	Weekly load(h/w)
1- Dimensional analysis and units. (6hrs)					
(S.I. units, English units, C.G.S. units),					
(Normal method, II-Theorem).					
2- Type of fluid and properties of fluid. (2hrs)					
A- On basis of pressure effect:					
- Incompressible.					
- Compressible.					
B- On basis of shear force effect:					
- Newtonian.					
- Non - Newtonian.					
C- Type of fluid, basis on the state of fluid:					
- Static; tanks head, Manometers.					
- Dynamic.					
3- Incompressible Fluid; Non-Newtonian Fluid. (6hrs)					
a- Derivation of Bernulli equation.					
b- Correction to Bernulli equation.					
c- Effect of friction.					
d- Calculation of friction in straight pipe					
and in fitting.					
e- Calculation of horsepowers.					
f- Equipment;					
Kind of pump.					
Valves.					

Fitting.

- 4- Compressible Fluid. (14hrs)
- a- Introduction, different between comp. and Incomp. fluid.
  - b- Derivation of General equation of compressible.
  - c- Calculation of friction.
  - d- Calc. of work of comp.
    - 1- for Isothermal comp.
    - 2- for Adiabatic comp.
  - e- Calc. of electric consumption and motor power of compressor.
  - f- Equipement: compressor, blower, vans.
- 5- Newtonian fluid. (6hrs)
- a- Definition.
  - b- Calculation of friction.
- 6- Non-Newtonian fluid. (6hrs)
- a- Definition.
  - b- Different from non-Newtonian.
  - c- Calc. of friction.
- 7- Flow Measurement. (12hrs)
- Orific, Venture, pitot tube
- 8- Applied Fluid Mech. to Ch. Eng. processes. (8hrs)
- (Calc. of pipe net-work between equipment)
- 1- For Incomp.
  - 2- For comp.
- 9- Flow of fluid through granular beds and (10hrs)
- packed colum.
- 10- Mixing. (6hrs)
- 11- Two phase flow. (4hrs)

Second year Curriculum

Properties of Materials

---

Theoretical Practical Tutorial Units

---

2                      1                      1                      6 weekly load (h/w)

- 1- Atomic and crystal structure. (3hrs)
- 2- Miller indices X-Ray diffraction, (2hrs)  
effects of radioactives on the Engineering materials.
- 3- Imperfection in crystals. (2 hrs)
- 4- Atoms movements in Engineering materials. (2hrs)
- 5- Thermal properties of Engineering materials. (3hrs)
- 6- Electrical properties of Engineering materials. (3hrs)
- 7- Solid solution. (2hrs)
- 8- Phase diagrams. (1hrs)
- 9- Ferrous metals and their alloys. (4hrs)
- 10- Non-Ferrous metals and their alloys. (4hrs)  
(copper and its alloys), aluminum and its alloys, magnesium alloys, their properties and uses.
- 11- Corrosion (definition and importance of (8)  
corrosion, types of corrosion, corrosion prevention.
- 12- Polymers (definition, classification, (10hrs)  
molecular weight distribution, effect of molecular weight on the properties of polymers, types of polymers and rubbers and their uses.

- 13- Ceramics (plastic-and non-plastic raw materials, types-and structure of clays, action of heat on clays  $\text{SiO}_2\text{-Al}_2\text{O}_3$ -phase diagram, differential thermal analysis (DTA) Refractories and glasses. (10hrs)
- 14- Phase changes in materials. (2hrs)
- 15- Composite materials. (2hrs)

Second year Curriculum

Computer Programing

Theoretical Practical Tutorial Units

2 1 2 7 weekly load (h/w)

1-Introduction (2hrs)

modes of operation, statements and commands  
control keys, editing, LIST, RUN, NEW, DELETE,  
COLOR, error messages.

2- Arithmetic (2hrs)

constants, variable, arithmetic and logical  
operators, precedence rule, use of brackets,  
library functions, arithmetic statements.

3- Input output. (2hrs)

Keyboard and CRT, INPUT, PRINT, READ, DATA,  
TAB, SPC, control characters.

4- Control statments. (5hrs)

Go TO, IF THEN, looping, FOR, NEXT, multiple  
loops, ON GOTO, a  
Application in series evaluation, statistics, and Newton-  
Raphson iteration.

5- Subscripted variables. (5hrs)

arrays and subscripts, DIM, one-dimensional  
arrays, two-dimensional arrays, applications  
in numerical methods.

6- Subprograms.

(3hrs)

types of subprograms, functions, DEF FN, subroutines, GOSUB RETURN, applications.

7- Peripheral operations

Printers, LLIST, LPRINT, cassette recorders floppy drives, FILES, SAVE, LOAD, MERGE, file I/O operations.

8- Graphics

CRT, types of screens, pixels, SCREEN, PSET (4hrs)  
LINE, CIRCLE, DRAW, applications in curve plotting.

9- Other computer languages.

(4hrs)

FORTRAN, structured programming, fourth-generation languages, application packages, artificial intelligence.

Second year Curriculum

Theromodynamics

Theoretical Practical Tutorial Units

2 - 1 5 weekly load(h/w)

- 1- Introduction (2hrs)  
Fundamental quantities. Time, length, Mass, Force, Temperature, Secondary quantities, Volume, pressure, work, Energy Heat.
- 2- First Law and other basic concepts (4hrs)  
Joules experiments, Internal Energy Formulation of the first law, Thermodynamics state and state Functions Enthalpy, the steady state flow processes, The reversible processes, Heat capacity and specific Heat, equilibrium, the phase rule.
- 3- Volumetric properties of pure fluids. (8hrs)  
The PVT behaviour of pure substances, the virial equation, The ideal gas, Cubic equation of state, Generalized correlation and the Acentric factor.
- 4- Heat Effects. (6hrs)  
Heat capacities of gases as a function of temperature, solids and liquids, heat change accompanying phase change, heat of formation, combustion and reaction, heat effects of industrial reactions.

The second law of thermodynamics. (6hrs)

Heat engine, Entropy, Second law limitation and real process, Entropy change and irreversibility and probability (statistical thermodynamics),

Third law of thermodynamics.

Thermodynamics properties of fluids. (10hrs)

Relationships among the thermodynamic properties (including Helmholtz and Gibbs free energies and chemical potential). Steam formation and two phase system, saturated temperature and pressure, Triple point, wet vapour and dryness fraction. Types of thermodynamic tables and diagrams, steam power plant cycle and analysis, Barometric condenser, metering and throttling processes, steam and gas turbines.

Refrigeration and liquefaction. (12hrs)

Refrigeration cycles (Carnot, Air, Vapor-compression) and comparisons, Choice of refrigerant, Absorption, Refrigeration, the heat pump, liquefaction process.

Phase equilibrium. (6hrs)

The nature and criteria of equilibrium, Binary system, vapor pressure of an ideal solution and non ideal solutions, Henry's law, Activity and Activity coefficients.

Chemical Reaction equilibrium. (6hrs)

Thermodynamics of ideal gases and mixtures, Derivation of the general equilibrium expression, Chemical equilibrium of ideal and non-ideal gases,

Determination of equilibrium constant, Reaction equilibrium in solutions. Standard Gibbs free energy and calculations, spontaneity of chemical reaction, effect of temperature on chemical equilibrium. Influence of temperature on Gibbs free energy change.

Second year Syllabus

Fuels Technology

Theoretical Practical Tutorial Units

---

1	2	1	5 weekly load(h/w)
1- Energy and Fuels.	]		(3hrs)
2- Classification of Fuels.			
3- Evaluation of crude oil.	]		(4hrs)
4- Production of Petroleum fractions.			
5- Motor Gasoline.	]		(7hrs)
6- Kerosine and Jet Fuels.			
7- Diesel Fuels.			
8- Fuel oils.			
9- Lubricating oils and Asphalte	]		
10- Gaseous Fuels.	]		(3hrs)
11- LPG, LNG.			
12- Combustion calculations.	]		(4hrs)
13- Combustion characteristics.			
14- Gaseous Fuels burners.	]		(6hrs)
15- liquid Fuels burners.			
16- Combustion in Furnaces and Boilers.			(3hrs)
Total			(30hrs)

Second year Curriculum

Physical Chemistry

Theoretical Practical Tutorial Units

3

1

4

9 weekly load(h/w)

- 1- The description of ideal and real behaviour of gases and the related equations. (9hrs)
- 2- Change of state: one component systems and binary liquid mixtures. liquid -vapour composition and effect of temperatures, and solubility of gases in liquids. (12hrs)
- 3- Surface Chemistry; The physical properties of surfaces between different phases, and related theories and calculations. (15hrs)
- 4- Thermochemistry: Enthalpies of chemical changes and reactions of compounds and solutions and its dependence on temperature. (6hrs)
- 5- Chemical Kinetics: The rate of chemical reactions, rate constants, order of reactions in static and flow systems, homogenous and heterogenous catalysis and enzyme reactions and kinetics. (24hrs)
- 6- Electrochemistry Properties and theories of electrochemical systems, and solutions of electrolytes. (12hrs)
- 7- Electrochemical Cells: Properties and reactions of electrodes and different type of cells, oxidation-reductions reactions, Electrolysis and corrosion. (12hrs)

Third year curriculum

National Education and Socialism

Weekly load (h/r).

1                    -                    1                    3

Refer to centralized curriculum

Third year Curriculum

Applied Mathematics

Theoretical Practical Tutorial Units

3                      1                      -                      7      Weekly load(h/w)

- I- Ordinary differential equation.                      (16hrs)
- Solution of first order differential equations.
  - Solution of second order differential equations.
  - Higher order differential equations.
  - Simultaneous differential equations.
  - Application for chemical engineering.
- II- Solution of differential equation by series. (8hrs)
- methods
- Simple series solutions.
  - Method of Frobenius.
  - Bessel's equation.
  - Application for chemical engineering.
- III- The Laplace Transformation.                      (12hrs)
- The Laplace transform.
  - Properties of the Laplace transformation.
  - The inverse transformation.
  - Inversion by partial fraction.
  - Convolution.
  - Solution of differential equations.
  - The transforms of special functions, step function, staircase functions, periodic function trigonometric.

IV- Partial differential Equations. (8hrs)

- Formulating of partial differential equations, derivation of heat conduction equation, wave equation and Laplace equation.
- Solution of partial differential equations. method of separating of variables and Laplace transformation method.

V- Numerical analysis. (16hrs)

- The difference operators.
- Interpolation.
- Finite difference equations.
- Differentiation and Integrations.
- Solutions of first and second order differential equations.
- Systems of differential equations.
- Applications for chemical Engineering.

Third year curriculum

Units Operations (1)

Theoretical Practical Tutorial Units

3                    3                    1                    9 Weekly load (h/w)

- Mechanical and physical separation processes. (6hrs)
  - Settling and sedimentation
  - Filtration (6hrs)
  - Centrifugal separation (6hrs)
  - Particulate solid. (3hrs)
  - Mechanical size reduction. (3hrs)
- Mass Transfer Operations
  - Diffusion. (15hrs)
  - Definition of mass transfer Molecular and convective components of mass flux
  - Diffusion in gases and liquid.
    - Steady state diffusion of A through B.
    - Steady state equimolar diffusion.
    - Maxwell theory of diffusion for gas and Liquid.
  - Steady state diffusion in multicomponent mixture.
  - Calculation of diffusivity.
  - Diffusion through varying area.
  - Diffusion of solid.
  - Differential equation of continuity equation of mass transfer.
  - Unsteady state diffusion.
- Theories of mass transfer and mass transfer coefficients. (9hrs)

- Enthalpy- composition diagram.
- Multi component plate-to-plate-calculations.
- Lewis-Metheson method, Thiele-Gebbes and theta Method.
- Azeotropic and extractive-distillation.
- Steam distillation.
- Absorption and distillation efficiency.
- Distillation in packed tower.

- Two-Film theory
- Interphase theories of mass transfer  
Higbie, Danckwerts and other.
- Overall and individual mass transfer coefficients.
- Dimensional analysis in mass transfer.

Absorption (15hrs)

- Vapour-Liquid equilibrium.
- Mass transfer coefficients (wetted-wall towers)  
in packed towers.
- Types of Towers.
- Absorption in plate and packed Towers.
- Design in packed tower.
- Calculation of height of transfer units.  
(overall and individual)
- Calculation of number of transfer unit.
- Absorption in dilute mixture.
- Absorption in concentrated mixture.
- Design of plate towers.
- Non- isothermal absorption.

Distillation (27hrs)

- Vapour-liquid equilibrium.
- Method of distillation.
- Continuous distillation.
- Lewis-Sorel method.
- McCabe-Thiele method.
- Feed condition, feed plate location, Multiple feed and  
side stream, Live stream and tray efficiency.
- Fenske and Underwood equations.
- Gilliland's method.
- Design of distillation tower.

Third year Curriculum  
Chemical Engineering Equipments

---

Theoretical Practical Tutorial Units

---

1                          2                          4                          Weekly load (h/w)

Part A

---

- 1- Process planning. (6hrs)
  - Scheduling and flow sheet desing.
  - Flow sheet types and designation.
  - Block diagram.
  - process flow sheet.
  - piping and instruments diagram.
  - Utility flow sheet.
  - Equipmment layout and plot plan.
  - Application of the above in tutorials.
- 2- Piping net works and pumps. (6hrs)
  - pipe fittings, valves, steam traps etc.
  - piping design standards.
  - piping material and selection.
  - pump specifications and data sheets.
- 3- Vessels and Tanks. (6hrs)
  - Types of vessels. Flash drums, LPG tanks...etc.
  - Criteria in vessel design.
  - Stress considerations.
  - Design of tall vertical vessels.
  - Design of pressure vessels.

4- Heat Transfer Equipments. (6hrs)

- Types of exchangers and applications.
- Exchanger ratings, exchanger design.
- Exchanger specification sheets.
- Furnaces.
- Convection and radiation zones.
- Types of fuels, burners and arrangements.
- Steam boilers, types of boilers.

5- Mass Transfer Equipments. (6hrs)

- Types of columns. plate and packed.
- Types of plates and packings.
- Design features.
- Pressure drops in columns.

#### Part B

Complete equipment design of each of the following units:

1- Pressure Vessel

Flash drum, gas-liquid separator, LPG storage tank, cyclone separators ..... etc.

2- Heat Exchanger

Tube and shell heat exchanger, plate heat exchanger, boilers, furnaces ....etc.

3- Mass Transfer Equipment

Distillation columns, absorbers, extractors, dryers ..... etc.

- Internal transport processes, reactions and diffusion in porous catalyst. (6hrs)
- The design of heterogeneous catalytic reactors, packed bed reactors, isothermal and adiabatic operations. (8hrs)
- Slurry reactor. (4hrs)
- Fluidized bed reactor. (4hrs)
- Trickle bed reactor. (4hrs)
- Thermal characteristics of catalytic reactor. (2hrs)

## Third year Curriculum

### Reactor Design

#### Theoretical Practical Tutorial Units

3                      -                      1                      7    Weekly load(h/w)

- Review of kinetics of homogeneous reactions. (4hrs)
- Classification of reactor, choice of reactor type, choice of process conditions. (4hrs)  
The design of homogeneous reactors.
- Batch reactors, basis design equation, time, isothermal and non-isothermal operations. (8hrs)
- Tubular reactors, basis design equation, and non-isothermal operations, pressure drop. (8hrs)
- Continuous stirred tank reactors, ideal mixing, residence time, design equations, autothermal operation. (8hrs)
- Non-steady flow (semibatch) reactors, recycle reactors. (4hrs)
- Comparison of reactors for a simple and multiple reactors. (4hrs)
- Heterogeneous process, catalysis, adsorption (BET), biochemical reactions. (8hrs)
- Rate equations for fluid-solid catalytic reactions. (8hrs)
- External transport in heterogeneous reactions, mass and heat transfer correlation for fixed bed, fluidized bed slurry and trickle bed reactors. (6hrs)

Third years Curriculum

Engineering Economics and Optimization

Theoretical Practical Tutorial Units

2 - 1 5 Weekly load(h/w)

Part A

1- Introduction to process economics. (2hrs)

2- Elements of economic analysis. (8hrs)

Money value, type of interest and interest

compounding profitability analysis, Depreciation,

Continuous cash flow, Discounted cash flow.

3- Visibility studies(Technical and Economic (4hrs) studies).

4- Cost Estimation. (10hrs)

Equipment cost, fixed cost manufacturing cost, plant cost.

5- Economic Design Criteria. (10hrs)

Profitability studies present value of

future Money completion for capital,

evaluation of design criterion Accounting

for risk Economic life of processes.

Part(B)

1- Introduction to process optimization. (2hrs)

2- Organization of Optimization Problem system models. (4hrs)

3- Single Variable  
-----

(12hrs)

Analytical method, Numerical method,  
graphical method numerical search, Bounded function  
open ended function, Direct search, Dichotomous  
search, Golden-section search Fibonacci search.

4- Multivariable Optimization  
-----

(8hrs)

Necessary and sufficient conditions  
for extreme values in general case, slack  
variable and constrained variation, Graphical  
solution, simplex method, linear  
programming and its applications to  
chemical Engineering problems (Transportation  
Blending, scheduling).

Third year Curriculum

Heat Transfer

Theoretical Practical Tutorial Units

	2	2	1	7	Weekly load(h/w)
1- Modes of heat transfer.					(2hrs)
Material properties of importance in heat transfer.					
2- Steady state heat conduction in one dimension (plane wall, Radial systems, Heat source systems, Boundary surrounded by fluids, Overall heat transfer coefficient, Extended surfaces conduction-convection systems, Fins).					(12hrs)
3- Principles of convection. Transport equations. Fluid mechanics aspect of convection.					(14hrs)
Laminar boundary layer. Thermal boundary layer. Turbulent boundary layer, Empirical and practical relations for pipe and tube flow. Flow normal to single and tube banks.					
4- Heat exchangers. Various types and their general characteristics. Fouling factor. Heat exchanger mean temperature differences. Co-current and counter current flow. Parallel and counter current flow. Parallel and series arrangements. Pressure drop calculations.					(8hrs)

- 5- Shell and tube exchangers. Types and (4hrs)  
various specifications. Design calculations by conventional method and by effectiveness and (NTU) method. Optimum design calculation.
- 6- Condensation and boiling heat transfer. (6hrs)  
condensation of single vapour. Design calculations for condenser.  
condenser-subcooler and Desuperheater-condenser.
- 7- Radiation and furnace design. Radiation (10hrs)  
properties.  
Shape factor. Heat exchanger for non black  
bodies.  
Parallel planes. Shields. Gas radiation. Boiler Design.
- 8- Unsteady state heat transfer. (4hrs)

Total (60hrs)

## Third year Curriculum

### Statistics and Measurements

#### Theoretical Practical Tutorial Units

1	1	3	Weekly load(h/w)
Introduction			(2hrs)
Statistics, population and sample, descriptive and inductive statistics, discrete continuous variables, graphical representation of data.			
Measurements.			(4hrs)
absolute and relative measurements, independent and dependent variables, calibration, effects of environmental conditions, applications in measurement of physical properties.			
Sampling.			(2hrs)
random sampling, sampling methods, sampling of solids liquids, and gases, sampling error, sample size.			
Frequency Distributions.			(2hrs)
raw data, arrays, frequency, frequency distribution table, graphical representation of frequency distributions.			
Measures of central tendency.			(2hrs)
arithmetic mean, median, mode, geometric mean, harmonic mean, root mean square.			
Measures of dispersion.			
dispersion, the range, mean absolute deviation, standard deviation absolute and relative dispersion, coefficient of variation, standardized variables.			

- 7- Standard distributions. (2hrs)  
The normal distribution, binomial distribution, Poisson distribution, table of areas under normal distribution curve.
- 8- Chi-square distribution. (2hrs)  
Chi-square distribution, confidence intervals, degrees of significance test, chi-square test, freedom, goodness of fit.
- 9- Curve fitting. (4hrs)  
Curve fitting, method of least squares, straight line relation, straight line forms, polynomials, regression, correlation coefficient.
- 10- Errors. (2hrs)  
types of errors, error estimation, propagation of errors.
- 11- Measuring instruments. (4hrs)  
Temperature, pressure, flow rate, level, composition.

Fourth year curriculum

National Education and Socialism

Weekly load (h/r)

Theoretical Practical Tutorial Units

1            -            1            3

Refer to centralized curriculum

Fourth years Syllabus

---

Plant Design

---

Weekly load (h/w)

Theoretical Practical Tutorial Units

---

1                    -                    2                    4

1- Introduction: to include:

- a- Reviewing the different methods of manufacturing the product, comparing them by referring to scientific references and then choosing the suitable one.
- b- Brief description of chemical and physical processes involved in the chosen method and listing main equipment in reference to the flow sheet.
- c- A study to justify the production capacity of the plant.

2- Heat and material balance for all streams. Energy balance of all equipment, listing summary of temperatures plus magnitudes of energy and flowrates.

3- Design of main equipment; one in each of the following fields:

- a- Mass transfer.
- b- Heat transfer.
- c- Reactor.
- d- Mechanical equipment (Pressure tank, pipeline network.. etc). Then outlying capacity of remaining equipment.
- e. Drawing the plant layout.

4- Other requirements: to include:

- a- Estimating equipment costs, fixed and operating cost, and cost of unit product.
- b- Choosing and justifying geographic location of the plant.

c- Discussing effect of plant and products on the environment.

Suitable treatments are to be suggested, to overcome these effects.

d- Choice of suitable control devices for used equipment.

Fourth year Curriculum

Unit Operations (2)

Theoretical Practical Tutorial Units

2                    1                    2                    7 Weekly load (h/w)

1- Boundary layer and analogies. (10hrs)

- Velocity distribution profile.
- Temperature distribution profile.
- Analysis of heat, mass and momentum transfer.

2- Evaporation

- 2.1. Heat transfer in evaporators.
  - 2.1.1. Heat transfer coefficient.
  - 2.1.2. Boiling at submerged surface.
  - 2.1.3. Forced convection boiling.
  - 2.1.4. Vacuum operation.
- 2.2. Multiple-Effect Evaporators.
  - 2.2.1. General principles.
  - 2.2.2. The calculation of multiple-effect systems.
  - 2.2.3. Comparison of forward and backward feeds.

3- Extraction

- 3.1. The mixing of Liquid-Liquid systems.
- 3.2. Liquid-Liquid extraction.
  - 3.2.1. Application.
  - 3.2.2. Design consideration.
  - 3.2.3. Equilibrium conditions.
- 3.3. Calculation of the number of theoretical stages in extraction operation.
  - 3.3.1. Concurrent contact with partially miscible solvents.
  - 3.3.2. Counter-current contact with immiscible solvents.

3.3.3. Counter current contact with immiscible solvents.

3.3.4. Counter current contact with partially miscible solvents.

3.4. Continuous Extraction in Columns.

4- Humidification and dehumidification and cooling tower. (14hrs)

4.1. Humidification terms.

4.2. Humidity data for air-water system.

4.2.1. Temperature-Humidity chart.

4.3. Addition of liquid or vapour to a gas.

4.4. Dehumidification.

4.5. Water cooling.

4.5.1.1. Height of packing.

4.5.1.2. Change in air condition.

4.5.1.3. Evaluation of heat and mass transfer coefficients.

4.6. Systems other than Air-water.

5- Drying (6hrs)

5.1. Introduction and general principles.

5.2. Rate of drying.

5.2.1. Drying periods.

5.3. The mechanism of moisture movement during drying.

5.4. Classification and selection of dryers.

6- Crystallization (8hrs)

6.1. Introduction

6.2. Growth and properties of crystals.

6.2.2. Nucleation

6.2.3. Crystallization rate.

6.2.4. Effect of impurities on crystal formation.

6.2.5. Effect of temperature on solubility.

6.2.6. Fractional crystallization.

6.2.7. Caking of crystals.

6.3. Crystallizers.

6.3.1. Bath crystallizers.

6.3.2. Continuous crystallizers.

Fourth year Curriculum

Process Control

Theoretical Practical Tutorial Units

2 2 1 7 Weekly load(h/w)

1- Process dynamics and transient response of the systems.

- Review of Laplace transform.
- Introduction to automatic feed back control systems in chemical process industries.
- Fundamental of process dynamics and transient response characterization.
- Dynamic behaviour of first-order systems.
- Linearization techniques of non Linear systems.
- Transient response of interacting and non-interacting systems.
- Second -order systems and their dynamic characteristics.
- Transient response of transportation lag system.

(20hrs)

2 - Industrial controller actions.

- Introduction to different industrial controller actions and their dynamic characteristics.
- Selection criteria for various control modes.
- Final control elements, their characteristics and sizing.
- Dynamic and control of chemical reactor system.

(10hrs)

3 - Characteristics of the closed loop systems.

- Overall closed loop transfer functions and block diagram algebra.

- Transient response of simple closed loop control systems.
- Stability of control systems.
- Introduction to the frequency response analysis and design techniques.

(20hrs)

4- Dynamic and control of some chemical processes.

- Dynamic and control of heat exchangers.
- Dynamic and control of Distillation columns.
- Introduction to computer control of chemical processes.

(10hrs)

Fourth year Curriculum

Operation and Management of Industrial

---

Theoretical Practical Tutorial Units

---

System Management

---

(Bhrs)

Utilities

---

General requirements for utilities supply and distribution.

Steam uses in chemical plants removal and utilization of condensate problems of steam pipes net work.

Industrial water and Effluent Treatment classification of water according to the international (PL scale) water and sludge treatment systems

Industrial processes available for:

GPR Gross Particulate Removal

SPR Suspended Particulate removal

DMR Dissolved matter removal

Sludge treatment systems.

Compressed air and Nitrogen specification, distribution and uses in chemical plants other utilities (cooling conditioning, ventillation, Humidification, electricity..).

Environment Pollution Control

---

(8hrs)

Dangers of pollution -Importance of environment preservation.

Effect of weather on atmosphere pollution

Industrial processes available for purification of waste gases.

Measurements for pollution control

Water Pollution.

Gas studies.

Hazards In Chemical Plant Operation (8hrs)

Identification of Hazardous atmosphere sources of hazards in industry.

Hazard evaluation in industrial processes.

Fault tree analysis.

Safety in the operation of chemical plants.

Loss Prevention Concepts and Studies in Industry (8hrs)

Sources and evaluation of loss in industry

Reduction of loss in industry

Case studies.

Quality Control (6hrs)

What is quality-Design and production quality-

Quality and cost-importance of quality control

requirement of quality control.

Reliability Engineering Concepts and Application (6hrs)

Reliability definition. Age cycle, Reliability and cost, Reliability block diagram.

Reliability evaluation of industrial systems.

Methods of improving the reliability of industrial system.

Definition of Availability.

Factors affecting the availability of industrial system.

method of improving availability of chemical plants.

Availability evaluation of chemical plants case studies.

Maintenance

(6hrs)

-----  
Type of maintenance

Problems of maintenance

Maintenance programming.

Introduction of Production Planning and Control (6hrs)

-----  
Importance of good production planning, factors

affecting production planning charting Types

and uses forecasting, scheduling, linear programm-

ing critical path analysis case studies.

Fourth year curriculum

Petroleum and Petrochemical Schemes

\* Gas Engineering (First term only)

Theoretical practical Tutorial Units

Weekly load (h/w)	2	-	1	5
----------------------	---	---	---	---

- Physical and thermodynamic properties of gases.
- Production of gas.
- Compression and expansion.
- Separation processes.
- Dehydration.
- Sweetening.
- Liquifaction.

\* Chemical Processes (First term only)

Theoretical Practical Tutorial Units

Weekly loads	2	3	-	6
--------------	---	---	---	---

- The main petrochemical processes for production basic raw material and intermediates for petroleum and Petrochemical Industries such as:
  - Cracking and steam cracking.
  - Oxidation.
  - Dehydrogenation and hydrogenation.
  - Chlorination.

Alkylation.

Sulphonation.

Polymerization.

Polycondensation.

- Other related chemical processes.

Fourth year curriculum

Petroleum and Petrochemical Scheme

\* Petroleum Refinery (second term only)

Theoretical Practical Tutorial Units

---

Weekly load (h/w)	2	3	-	6
----------------------	---	---	---	---

- Pretreatment of crude oil.
- Tubular furnaces.
- Crude oil distillation and stabilization of petroleum fractions.
- Thermal and catalytical cracking.
- Reforming processes.
- Desulfurization.
- Lube oils processing.
- Utilities in the refinery.

\* petrochemical Complex (second term only)

Theoretical Practical Tutorial Units

---

Weekly loads (h/w)	2	-	1	5
-----------------------	---	---	---	---

- Low Olefins, Plastics.
- Di-olefins, Rubber.
- High Olefins, Detergents.
- Aromatics, Synthetic Fiber.
- H<sub>2</sub> and CO<sub>2</sub>.
- Utilities in petrochemical complexes.

Fourth year curriculum

Engineering Materials Scheme

\* Silicate Technology (First term only)

Theoretical Practical Tutorial Units

---

Weekly load      2                      -                      1                      5

Structural forms of silicates, ceramics raw materials, ceramics processes, preparation of raw materials, moulding, drying and firing. Ceramics, product, ordinary bricks, refractories, porcelains, cement and glass.

\* Corrosion (First term only)

Theoretical Practical Tutorial Units

---

Weekly load      2                      3                      1                      6

Corrosion definition and importance, mechanism of electrochemical corrosion, types, the electrochemical theory of corrosion. Corrosion of iron and steel in aqueous environment, effect of dissolved oxygen, effect of bacteria, effect of galvanic coupling, effect of velocity, effect of dissolved salts, natural water, metallurgical factors, heat treatment.

\*Polymer Technology (Second term only)

Theoretical Practical Tutorial Units

Weekly load            2                    -                    1                    5

Introduction, classifications of polymers, polymerization and the effect of kinetics on the molecular weights. Molecular weights and its distribution and methods of determination. Heat of softening and the glass-transition temperature and the factors affecting it. Physical properties and molecular factors affecting it. Modification of properties according to the applications requirements.

\* Composite Materials

Theoretical Practical Tutorial Units

Weekly load            2                    3                    -                    6

Definition, timber and plywood, fiber-reinforced materials, Dispersion-strengthened metals, cermets and polymers, concrete, glazes and enamels.

Fourth year curriculum

Chemical Industries Scheme

\* Chemical Processes (first term only)

Theoretical Practical Tutorial Units

---

Weekly loads (h/w)	2	3	-	6
-----------------------	---	---	---	---

- Oxidation, Sulphonation, Nitration, Alkylation Halogenation, Polymerization, Condensation Polymerization, Hydrogenation and dehydrogenation Ionization, Hydrolysis and dehydration, Electrochemical Process, Chemical decomposition.

\*Chemical Industries (1) (first term only)

Theoretical Practical Tutorial Units

---

Weekly loads (h/w)	2	-	1	5
-----------------------	---	---	---	---

A. Fertilizer and acids

- Development of Fertilizer Industries.
- Manufacture of ammonia gas.
- Manufacture of urea fertilizer.
- Phosphoric acid.
- Manufacture of phosphoric fertilizer.
- Sulphuric acid.
- Manufacture of sulphuric fertilizer.
- Nitric acid.
- Hydrochloric acid.

B- Petrochemical Industries.

- Detergents.
- Synthetic fibers.

- Organic acids.

- Polymers.

- Glycols and esters.

#### C- Explosive materials Industries

- Explosives industry.

- Powder industries.

- Black powder.

- Spherical powder.

- TNT.

Fourth year curriculum

Chemical Industries Scheme

\* Biochemical Engineering (second term only)

Theoretical Practical Tutorial Units

---

Weekly loads      2                      1                      5  
(h/w)

- Introduction.
- Kinetics of substrate utilization.
- Kinetics of enzyme-Catalysed reactions, and enzyme mechanisms.
- Transport phenomena in biochemical systems.
- Design and analysis of biological systems.
- Applications of biochemical engineering.

\* Chemical Industries (2)

Theoretical Practical Tutorial Units

---

Weekly loads              2                      3                      -                      6  
(h/w)

- A. Food Industry.
- Food elements.
  - Canning.
  - Cooling and freezing.
  - Fermentation.
  - Sugar and dates Industry.
  - Oils and soap Industry.
  - Carbonized liquor.
  - Food Simulation.

## B- Dyes and Pigments

- Natural.
- Synthetic.
- Direct Dyes.
- Basic Dyes.
- Acidic Dyes.
- Disperse Dyes.
- Active Dyes.
- Theories of Dying.
- Reactions of Dyes manufacture.
- Reactions of colourings manufacture.

Fourth year curriculum

Project

Theoretical Practical Tutorial Units

Weekly load      1                      2                      -                      4

- 1- Object of project
- 2- literature survey and related theoretical background.
- 3- Design and erection of required apparatus and practical experimentation, or preparation of planned computer programs and execution.
- 4- Analysis and discussion of results.
- 5- Conclusions and recommendations.

Note:  
-----

Projects employing computer usage only should be either:

- 1- Developments of equations, theories and deduction of practical relations of scientific use.
- 2- Design studies to obtain optimum solution for a certain problem with multiple variables.
- 3- Preparation of programs and systems of multiple applications in Chemical Engineering with wide scientific use.
