- A4. Able to design a chemical system, process, or component with consideration of realistic constraints including practical, economic, environmental, safety, ethical, social, and political implications.

B. Subject-specific skills

- B1. Integrate processing steps into a sequence and apply analysis technique such as energy and mass balance.
- B2. Chemical engineering graduates will possess self-learning skills to ensure life-long learning.
- B3. Chemical engineering graduates will have selected technical elective courses, concentrations, projects, and minors that satisfy their professional interest or career goals.
- B4. Able to function and work effectively alone and in a team environment, including multidisciplinary teams.

Teaching and Learning Methods

Lectures, Tutorials, Example Classes, Practical Applications, reports, Weekly homework problems.

Assessment methods

partial test (Oral questions : multiple choice ,alternative response), Open questions that have a definite answer , or do not have a definite answer, Quizzes, homework problems , Mid. term exam , Final exam.

C. Thinking Skills

- C1. Perform complete mass and energy balances for chemical engineering plants.
- C2. Apply the principles of chemical equilibrium and process thermodynamics to systems with chemical reactions.
- C3. Chemical engineering graduates will be able to write coherent, concise, and accurate technical reports.
- C4. Chemical engineering graduates will be able to use computers effectively for solving chemical engineering problems.

Teaching and Learning Methods

Written method implies the following forms of activity: copying, taking notes, composing theses, writing essays, etc.

Laboratory method implies the following forms of activity: conducting experiments, showing video materials, etc.

Practical methods unite all the teaching forms that stimulate developing practical skills in students.

Explanatory method is based on discussing a given issue.

Designing and presenting a project.

Discussion/debates. This is the most widely spread method of interactive teaching.

Case study – the teacher discusses concrete cases together with the students and they study the issue thoroughly.

Assessment methods

partial test (Oral questions :- multiple choice ,alternative response), Open questions that have a definite answer , or do not have a definite answer, Quizzes, homework problems , Mid. term exams , Final exam.

D. General and Transferable Skills (other skills relevant to employability and personal development)

- D1. Collaborate effectively within multidisciplinary team.
- D2. Work in stressful environment and within constraints.
- D3. Communicate effectively.
- D4. Search for information and engage life-long self-learning discipline.
- D5. Acquire entrepreneurial skills.
